The Academic Strength of Reykjavik University (RU)

(Report from RU Research Services, May 2024)

Introduction

The overall aim of the RU Research Services is to assist the University in implementing its research strategy (<http://en.ru.is/research/about/ru-research-strategy/>) and to support academic employees at the University in becoming researchers of international quality. The three main objectives of the RU Research Services are:

1. to assist in financing research at RU, e.g., by monitoring grant opportunities in Iceland and abroad and providing support in writing applications and managing grants.
2. to monitor and evaluate research activities at RU, e.g., carry out the RU Research Assessment, collect data on research activities, do research statistics and write reports on research development and the academic strength of RU.
3. to disseminate RU research activities within and outside RU and build connections with the main funders of research, both national and international funding agencies.

This report is divided into two main chapters. The first chapter is on RU publications in peer-reviewed outlets, and the second chapter outlines research grants from national and international competitive research funds to RU. There are two appendixes. The first is about publications in peer-reviewed outlets at RU departments, and the second is a list of grants RU received from national competitive funds from 2013-2023.

RU publications in peer-reviewed outlets

This report is based on data from research reports that academic employees with research duties submit to RU Research Services. All academic employees with research duties should submit a research report every second year on the 1st of October. This report does not include RU-affiliated publications by academic employees leaving the University before the 1st of October. Consequently, the number of RU-affiliated publications annually is, in fact, a bit higher than reported in this report.

The research report has eight sections: 1. Research output in peer-reviewed outlets; 2. Impact beyond academia on society; 3. Talks and presentations; 4. Research grants; 5. Supervision; 6. Other research-related work; 7. Research output in non-peer-reviewed outlets; 8. Other research-related information.

The section on research output in peer-reviewed outlets is divided into the following six chapters: 1. Articles in peer-reviewed scholarly journals; 2. Articles and abstracts in peer-reviewed conferences/symposia/proceedings; 3. Peer-reviewed books; 4. Peer-reviewed book chapters; 5. Other peer-reviewed publications, and 6. Patents.

All academic employees are obliged to provide information on whether their publications are RU affiliated or not and whether articles published in scholarly journals are published in so-called ISI journals. ISI is the abbreviation for Institute for Scientific Information, and ISI journals are regarded as journals of high quality and high impact. The most essential publishing standards and qualities of ISI journals are timeliness of publication and the peer-review process (at least two expert reviewers per article). Furthermore, the journal's impact and associated citation data are important factors.

Publications are counted according to the following method: If an article has two or more authors employed at RU, the article is counted only once as an RU publication. The same applies to abstracts, books, book chapters, etc.

Publication traditions are very different from one scientific field to another. Although all statistical data in this report is presented here in the same way for all departments, it is not done to enable a comparison between the departments. The data is primarily presented here to give a comprehensive view of the academic strength of the university/departments and how they have developed.

In 2023, about 62% of RU publications in peer-reviewed outlets are in peer-reviewed scholarly journals, about 32% at peer-reviewed conferences/conference proceedings, and about 4% are peer-reviewed books and book chapters (see Figure 1).

Figure 1: Number of RU-affiliated publications in peer-reviewed outlets 2013-2023 (Source: Research Reports from academic employees).

The number of articles in peer-reviewed scholarly journals has been increasing gradually, and the proportion of those articles published in ISI journals has also increased (see Figure 2). In 2023, the percentage of ISI publications was 98% in the Department of Engineering and the Department of Psychology and 94% in the Department of Computer Science (see Figure 3).

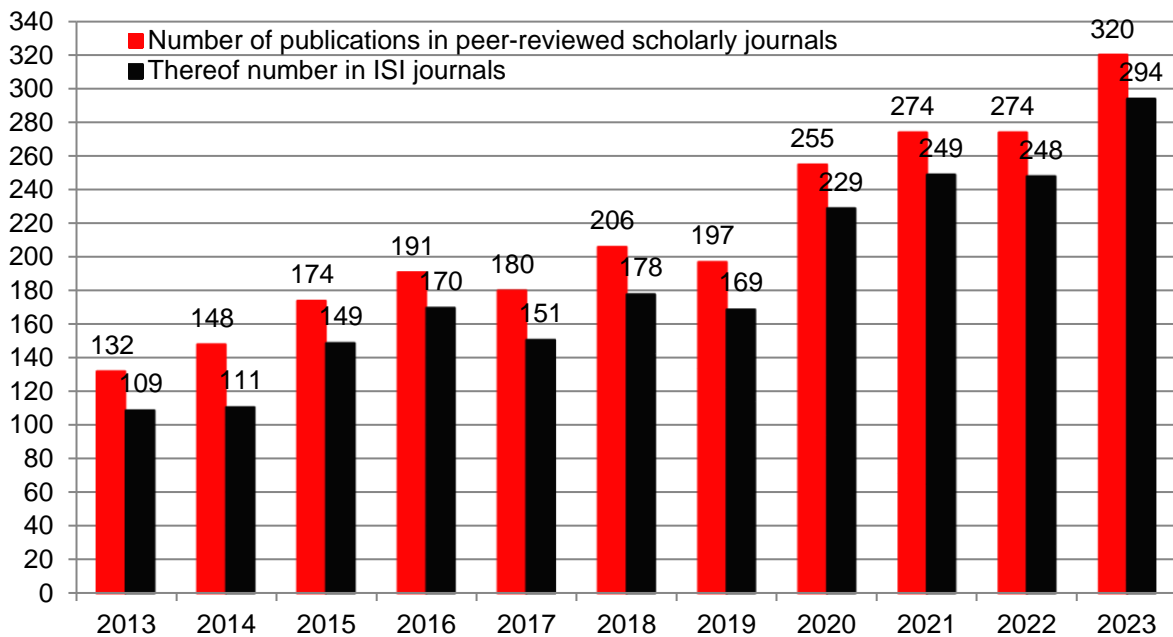

Figure 2: Number of RU-affiliated articles in peer-reviewed scholarly journals 2013-2023 and the number of those publications in ISI journals (Source: Research Reports from academic employees).

Department of Law publishes proportionally more in domestic peer-reviewed outlets than the other departments at RU (the same applies to other Icelandic law departments and law departments in other countries). It is essential to remember that in some cases, publishing the results in other than peer-reviewed domestic outlets is irrelevant. These publications may provide evidence of international excellence if they can be compared favourably with similar studies in other countries.

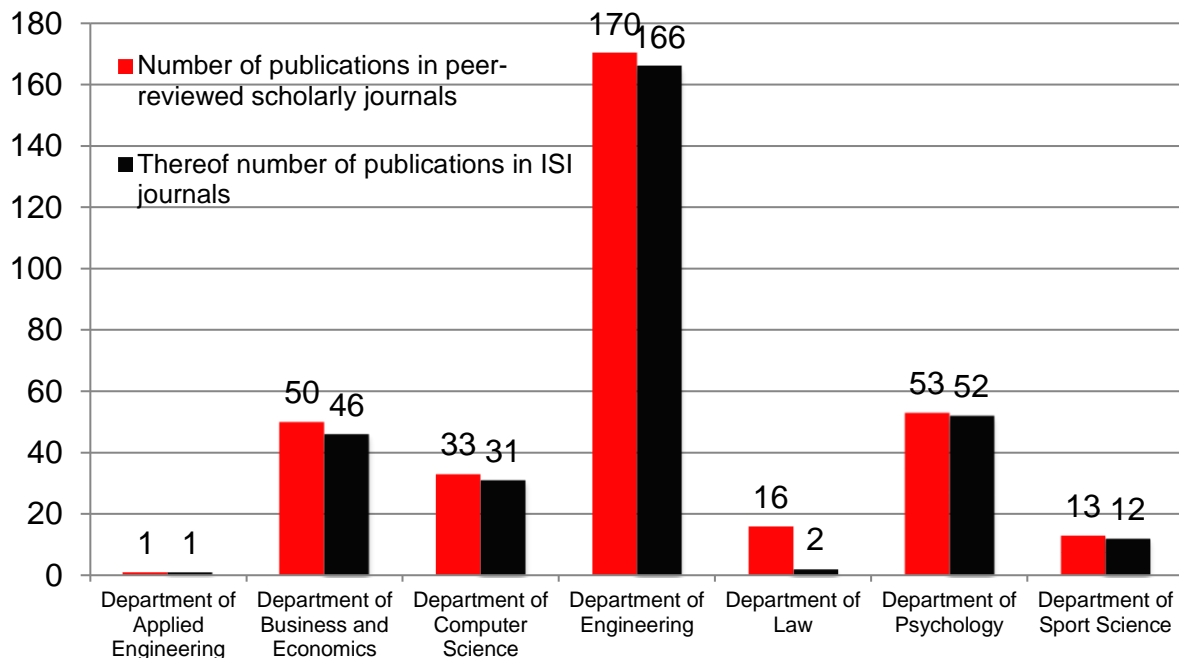

Figure 3: Number of RU-affiliated articles in peer-reviewed scholarly journals 2023 per department and the number of those publications in ISI journals (Source: Research Reports from academic employees).

The number of RU-affiliated publications in peer-reviewed outlets annually per academic employee has been around 3.7 and above in 2013-2023, see Figure 4. The number of RU-affiliated articles in peer-reviewed scholarly journals per academic employee has increased, see Figure 5. Around 95% of all publications published in 2023 are in English, see figure 6.

Research grants from national and international competitive funds

The external financing of research at RU has systematically been strengthened by significantly increasing efforts to obtain research support from domestic and foreign sources. The success rate in competitive research funds, where grant proposals of academics are peer-reviewed, is an essential criterion of academic strength. Therefore, the University must have efficient internal support, i.e., research services, to monitor opportunities for obtaining external research funds and assist in applying, developing budgets, and lending other administrative support.

Figure 7: Grants to RU from nationally competitive research funds 2013-2023, in thousand ISK (Source: The Icelandic Centre for Research – RANNÍS and other Icelandic competitive funds).

In 2013-2023, the total allocation from national competitive funds increased from around 257 million ISK 2013 to around 634 million ISK in 2023, as seen in Figure 7 above.

Figure 8 shows the allocation to RU-affiliated scientists from the Icelandic Research Fund (IRF) of the Science and Innovation Policy Council. The allocation has increased from 2013-2023, i.e., from around 134 million ISK in 2013 to around 525 million ISK in 2023.

Figure 8: Allocation to RU-affiliated scientists from the Icelandic Research Fund 2013-2023, in thousand ISK (Source: The Icelandic Centre for Research – RANNÍS).

Besides receiving grants from national research funds, the University receives grants from international research funds annually, e.g., from the EU Framework Program. Figure 9 shows foreign grant revenues from 2013-2023.

Only two faculty members at the Department of Applied Engineering do research and submit research reports. These two researchers had positions at the School of Science and Engineering until 2019. That year, the School of Science and Engineering was divided into two departments, i.e., Dept. of Engineering and Dept. of Applied Engineering. Publications at Dept. of Engineering (see above) include publications from the two researchers from the Dept. of Applied Engineering, but only for 2013–2018. Note that publications from the two researchers at Dept. of Applied Engineering are included in all statistics for the whole University 2019-2023.
